

# SCARLET PRO

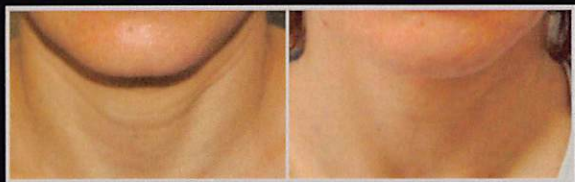

PREMIER RF MICRONEEDLING SOLUTION

## What is Scarlet Pro?

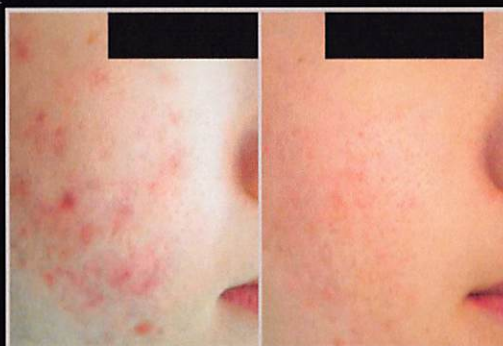

Scarlet Pro is the next-generation radiofrequency (RF) microneedling system designed to revitalize your skin from the inside out. It uses robotic motor-driven microneedles to deliver RF energy with enhanced precision, helping your body naturally stimulate collagen and elastin through hemostasis and dermal remodeling. The result? Smoother texture, improved skin tone and brightness, reduced appearance of fine lines, wrinkles and acne scars, and a revitalized, youthful glow.

## Am I a candidate?

Scarlet Pro is safe and effective for all skin types and tones. Whether you're looking to address signs of aging, loose or uneven skin, acne scars, stretch marks, or simply boost your skin's overall radiance, Scarlet Pro may be the perfect solution. Speak with your provider to learn how it can be tailored to your unique goals.

## How does Scarlet Pro work?

Scarlet Pro's proprietary robotic microneedles deliver RF energy with unparalleled consistency and control. The energy gently heats the skin at precise depths, triggering the body's natural healing response while minimizing discomfort. With its patented "Na Effect™" energy delivery system, Scarlet Pro treats the entire dermal layer evenly, creating predictable, visible improvements in fewer sessions.

## How is Scarlet Pro comfortable?

OmniSoft™ Tip technology is designed for ultimate comfort and intelligent delivery. Its motorized microneedles ensure smooth, consistent insertion, while its built-in sensory system captures data that fuels Scarlet Pro's real-time AI adjustments. The result? Accuracy you can feel with innovation built right into the tip.

## How many treatments will I need?

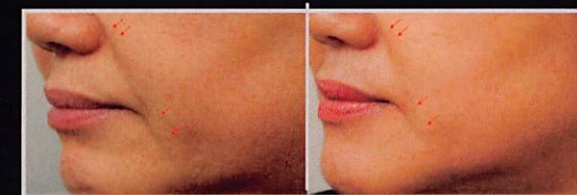

Many patients see improvement after just one session, but 3–4 treatments spaced about a month apart are typically recommended for optimal, lasting results. Your provider will customize a plan based on your skin's condition and your personal goals.

## What is the downtime?

Scarlet Pro's advanced technology results in minimal downtime. Some redness or warmth may be noticed immediately after treatment, but most patients return to normal activities within hours.

## How long does the treatment take?

Treatment times typically range from 20–40 minutes, depending on the size of the area treated. You can easily fit a Scarlet Pro session into your schedule and return to normal activities the same day.

## When will I see results?

You may begin to see visible changes in your skin within 2–4 weeks after your first treatment, with full results continuing to improve over 3–4 months as collagen builds and your skin regenerates.

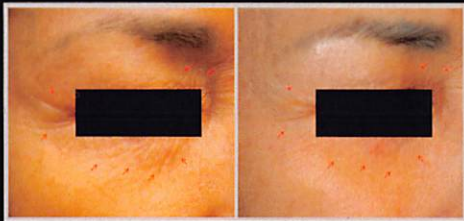

Ask your provider if Scarlet Pro is right for you. Schedule your consultation today.
